Summary

Full-stack engineer with 2+ years of production experience building and shipping AI-integrated products, scalable APIs, and forward interfaces. Comfortable owning the full stack from schema design to responsive UI. A strong bias for clean architecture, fast iteration, and tools that actually matter. Experienced in integrating LLM APIs into production systems and building the infrastructure around them. Thrives in lean teams where ownership is high and impact is direct.

Technical Skills

Languages & Frameworks: Python, TypeScript, JavaScript, C#, Node.js, React, Angular, ASP.NET Core, Django, Swift

AI & Integrations: Anthropic Claude API, Prompt Engineering, LLM tool use, Google API, REST API design

Data & Infrastructure: PostgreSQL, MySQL, AWS, Data Modeling, Rate Limiting, Git, Postman

Frontend: HTML, CSS/SCSS, Responsive Design, Framer Motion, Component Architecture

Projects

TasteMind | *Node.js, Express, Anthropic Claude API, Google Places API, PostgreSQL, React*

- Architected and shipped a full-stack AI dining concierge from scratch, with integrated Anthropic Claude to parse natural language cravings and user taste history, then fan out to **parallel Google Places API calls** to surface 6 real, grounded restaurant recommendations per session
- Designed a feedback personalization loop where visit data only persists to PostgreSQL after a post-meal user review, **ensuring the model's recommendations measurably improve with every interaction** rather than decaying into generic suggestions
- Engineered a location validation pipeline using Google Geocoding API to resolve ambiguous city inputs before any downstream API calls execute, **preventing wasted requests** and surfacing clear error states to the user
- Built production infrastructure around the AI layer: per-user daily rate limiting, Helmet middleware, parameterized queries, and full input validation across all routes; deployed live on Railway with a fully responsive mobile interface

Optimizer | *TypeScript, Angular, C#, ASP.NET Core, REST API, MySQL, HTML/SCSS*

- Designed and built a full-stack scheduling and analytics platform from zero, translating complex operational workflows and stakeholder requirements into a maintainable, production product, sole engineer from architecture to launch
- Built dashboards in Angular that surfaced real scheduling insights for non-technical staff, reducing reliance on manual reporting and cutting data extraction time by **58%**
- Engineered a RESTful API layer supporting scheduling, bulk data extraction, and multi-system with sync designed with extensibility in mind so new data sources could be onboarded without touching existing endpoints

Experience

Full Stack Software Engineer

2022 – 2024

StatRad, LLC

Poway, CA

- Owned and maintained RESTful APIs powering scheduling, analytics, and data synchronization across multiple internal systems, primary engineer responsible for uptime, performance, and iterative improvement of the integration layer
- Reduced organizational inefficiencies by **40%** by designing and shipping a backend scheduling and data management
- Resolved **50+ production issues** through systematic debugging and root cause analysis, reducing system downtime by **20%**, built an instinct for diagnosing failures quickly under pressure
- Collaborated closely with engineers and non-technical stakeholders to translate complex API behavior and system design into accessible language, keeping product decisions grounded in actual user needs

Bartender

2022 – Present

NOLA

San Diego & Palo Alto, CA

- Managed customer interactions requiring active listening, rapid judgment, and adaptation

Education

University of San Diego

Bachelor of Arts in Computer Science

Leadership

Association for Computing Machinery

Outreach Chair

- Built and managed **150+ professional relationships** and coordinated **18+ industry panels**, developing a strong instinct for communicating technical value to diverse audiences, both engineers and executives alike
- Facilitated **15+ technical sessions** breaking down complex engineering concepts for students and developers, sharpening the ability to make hard ideas accessible without losing precision
